1. Introduction

The Automated Jewellery Rate Notification System is a Python-based project developed to automatically send daily jewellery rates to customers on WhatsApp. In many jewellery shops, the owner checks the gold rate manually from a website and then sends the updated rate to customers or WhatsApp groups. This process takes time and can cause mistakes.

In this project, we created a system that automatically fetches the live rate from a website, adds a shop margin using the plus (+) method, and sends the final rate to a selected WhatsApp group. We also developed a simple front-end interface where the user can enter the group ID, set a schedule time, add margin value, and then start the automation process.

This system reduces manual effort and makes communication faster and more accurate.

2. Objective

- To automatically fetch live jewellery rates from a website
- To add custom shop margin using plus (+) calculation
- To send updated rate automatically to WhatsApp group
- To create a simple front-end for easy user input
- To create a simple front-end for easy user input.

Its primary objective include:

1. Why We Chose This Subject

- We selected this project because many jewellery shops still update rates manually.

It is time-consuming and repetitive work. We wanted to solve a real business problem using automation and Python. This project also helps us understand web scraping, automation tools, and front-end integration in a practical way.

2. Benefits of This System

- Saves daily manual work
- Reduces human error

- Allows custom margin addition
- Sends accurate rate every time
- Supports scheduled automation
- Easy to use because of front-end interface

3. Proposed work

The main purpose of this project is to automate the complete process of checking jewellery rates and sending them to customers

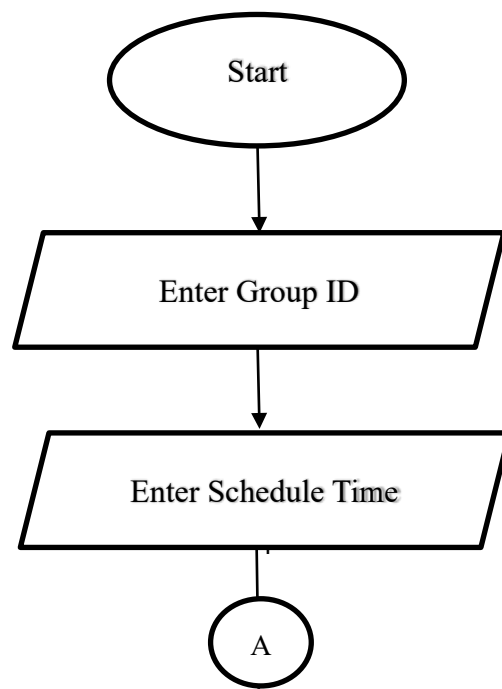

Working Process:

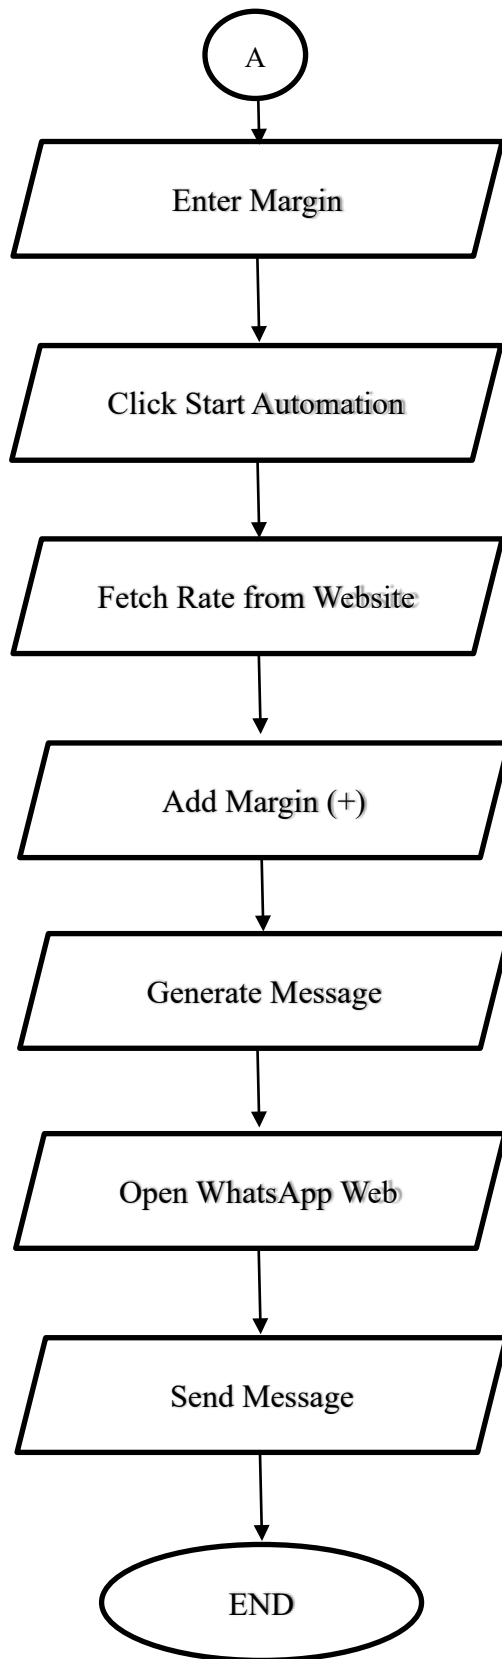

- User opens the front-end system.
- User enters WhatsApp group ID.
- User sets schedule time.
- User enters margin value (for example +800).
- User clicks on “Start Automation”.
- System opens the website and fetches live rate.
- System adds margin to the original rate.
- Final rate message is prepared.
- WhatsApp Web opens automatically.
- Message is sent to the selected group.

The process runs automatically without manual work.

4. System Flowchart

- flowchart

5 Technology Details

Frontend: Html, CSS

Middleware : Python (Flask)

Backend: Python (Webdriver manager, Selenium webdriver, PyWhatKit)

We are designing an Website for automation of whatsapp(rate update)

6 Team details

1. Prajwal Ravindra Binorkar (23012)

Role: coding and backend, frontend and middleware (Integration)

2. Bhagyashri Dhananjay Joshi (23058)

Role: coding frontend and Analyzing and Testing

7 Client details

Firm Name: Gayatri jewellers

Owner Name: Rushikesh Padwale

Address: Pundlik nagar,Chh.Sambhajinagar

Contact no:
